

Mouse Create: free STEM, Design & CS Courses for school groups

Alternate Name:

Category: [Education](#)

Organization:

Description: Mouse Create is a free online learning platform where over 11,000 students a year (5th grade through high school) build, collaborate, and share creative STEM, computer science and technology design projects. Our courses, lesson plans, collaboration, digital badging and portfolio features help educators build an environment for learners to explore, deepen, and practice creative and technical identities over time. Educators integrate Mouse project curriculum into their programs and classes, choosing from topics including circuitry, game design, web literacy, coding, green technology, video making, computer science, design thinking, sewable technology and more. Many of the projects can be facilitated remotely and/or asynchronously and require no special materials.
